

DigaliX

®

Make your dreams interactive

DigaliX is a technology company headquartered in Barcelona with a team specialised in interactivity and large format.

We change the way you connect with devices and we create new ones, just like our flagship product: **XTable Multitouch**.

Your projects, our commitment.
Imagine what you want and we will develop it so you can impress everyone.

Digital solutions to make everyday life easier

XTable Multitouch

Ergonomic interactive table, with more than 50 simultaneous touch points, ideal for collaborative environments.

It runs customised applications of our own design and others' standard applications.

Let it surprise you as a conference table and as an interactive surface for your teamwork.

Accessibility for everyone

It works in a large format, with UltraHD images, which facilitates the adaptability to partially-sighted people thanks to its screen's zoom.

The applications adapt to user's physical conditions. It allows you to work with different levels of size, shape, body parts and pressing time for the options' activation.

Medical meeting rooms

In both table and wall formats, XTable is a large surface to interpret high-definition images, make notes and store files in the medical record.

Interconnection between devices

Diferent XTables can communicate with one another or with other devices, which makes the sharing of working documents really easy.

Hold remote clinical meetings, present high-definition images or write down your notes on documents and export them to your device.

Objects detection

XTable can also recognise physical objects. The possibilities of this feature are endless:

- Run a video, an explanation or a document just by placing a particular object on the XTable.
- Use physical objects combined with computer applications to create dynamics of cognitive stimulation.

Custom-made software

Development of customised software in the platform that serves your needs the best.

XHealth application

With XTable, people who need an intensive medical follow-up can now do it at home. XHealth application allows the user to:

- Interconnect XTable with devices that measure clinical parameters as well as to keep a record of the variations registered.
- Have a telematic medical visit at home.
- Provide the patient with cognitive stimulating dynamics.
- Schedule a balanced weekly diet, keeping in mind all of the user's risk factors.

XHolo

Holographic assistant that may accompany the user in a range of activities, such as:

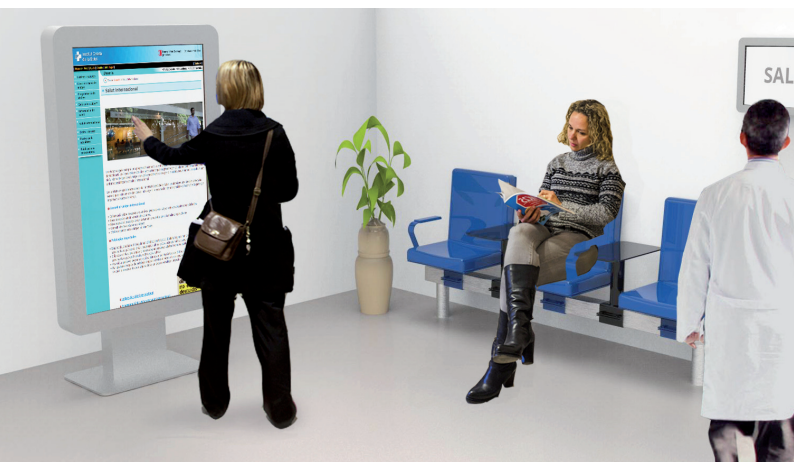

- To inform the patients in an interactive way.
- To play the role of a stretching class teacher.

Kinect

With Kinect technology, DigaliX develops interactive environments which are ideal to carry out activities of all kinds. You can do rehabilitation sessions, which combine physical exercise with games, and give the work a more playful aspect.

Waiting rooms with XFrame

XFrame is an interactive screen that stirs user's curiosity and provides him with information in a dynamic and entertaining way.

- Allow the doctor, the caregiver or the patient himself to set an alarm in order to take the medication on time for an optimal treatment.
- Automatically write the shopping list according to the weekly diet and buy its products online.
- Communicate with relatives and friends, read press, watch photos or videos... Because social aspect is worth being considered.

Do you want to do something but don't know how?
